

Has your teen ever wondered if they...

- **might be autistic?**
- **might have ADHD?**
- **or something else?**

I'm Alma Foster, a researcher from the University of Exeter. I'm doing a research study about young people (age 13-17) who have wondered whether they might be neurodivergent in some way (e.g., autism, ADHD).

- What was this like for them?
- What was this like for you as a parent/carer?

I would love to hear about your experiences as a parent/carer in a short online interview. If your young person wants to share their experiences too, they can choose to take part in a short online survey (if that is OK with you!).

Scan the QR code or click [this link](#) to let me know if you or your young person is interested in taking part.
